Problem 5.9, 5.12, 5.15, 5.19, 5.25, 5.56, 5.65, 5.70

2025-12-27

Problem 5.9

Fig. P5.9

Draw the shear and bending-moment diagrams for the beam and loading shown, and determine the maximum absolute value of (a) the shear, (b) the bending moment.

$$+\circlearrowleft \sum M|_A = -(30 \text{ kN/m})(2 \text{ m})(1 \text{ m}) - (60 \text{ kN})(3 \text{ m}) + R_B(5 \text{ m}) = 0 \quad \Rightarrow \quad R_B = 48 \text{ kN}$$

$$+\uparrow \sum F_y = R_A + R_B - (30 \text{ kN/m})(2 \text{ m}) - 60 \text{ kN} = 0 \quad \Rightarrow \quad R_A = 72 \text{ kN}$$

The units 'kN' and 'm' are omitted from the following equations.

$$V(0) = R_A = 72$$

$$V(x) = R_A - wx = 72 - 30x \quad (0 < x < 2)$$

$$V(x) = 72 - (30)(2) = 12 \quad (2 \leq x < 3)$$

$$V(x) = 12 - 60 = -48 \quad (3 < x \leq 5)$$

$$M(0) = 0$$

$$M(x) = R_A x - wx \left(\frac{x}{2} \right) = 72x - 15x^2 \quad (0 < x \leq 2)$$

$$M(x) = 72x - (30)(2)(x - 1) = 12x + 60 \quad (2 < x \leq 3)$$

$$M(x) = 12x + 60 - 60(x - 3) = -48x + 240 \quad (3 < x \leq 5)$$

$$|V|_{\max} = 72.0 \text{ kN} \quad \blacktriangleleft \quad (a)$$

$$|M|_{\max} = 96.0 \text{ kN} \cdot \text{m} \quad \blacktriangleleft \quad (b)$$

Problem 5.12

Fig. P5.12

Draw the shear and bending-moment diagrams for the beam and loading shown, and determine the maximum absolute value of (a) the shear, (b) the bending moment.

$$+\circlearrowleft \sum M|_A = -(3 \text{ kN})(0.3 \text{ m}) - 450 \text{ N} \cdot \text{m} - (3 \text{ kN})(0.7 \text{ m}) + R_B(1 \text{ m}) = 0 \Rightarrow R_B = 3.45 \text{ kN}$$

$$+\uparrow \sum F_y = R_A + R_B - 3 \text{ kN} - 3 \text{ kN} = 0 \Rightarrow R_A = 2.55 \text{ kN}$$

The units 'kN' and 'm' are omitted from the following equations.

$$V(x) = R_A = 2.55 \quad (0 \leq x < 0.3)$$

$$V(x) = R_A - 3 = -0.45 \quad (0.3 < x < 0.7)$$

$$V(x) = R_A - 3 - 3 = -3.45 \quad (0.7 < x \leq 1)$$

$$M(0) = 0$$

$$M(x) = R_A x = 2.55x \quad (0 \leq x < 0.3)$$

$$M(x) = 2.55x - 3(x - 0.3) = -0.45x + 0.9 \quad (0.3 \leq x < 0.5)$$

$$M(x) = -0.45x + 0.9 + 0.45 = -0.45x + 1.35 \quad (0.5 < x < 0.7)$$

$$M(x) = -0.45x + 1.35 - 3(x - 0.7) = -3.45x + 3.45 \quad (0.7 \leq x \leq 1)$$

$$|V|_{\max} = 3.45 \text{ kN} \quad \blacktriangleleft \quad (a)$$

$$|M|_{\max} = 1125 \text{ N} \cdot \text{m} \quad \blacktriangleleft \quad (b)$$

Problem 5.15

Fig. P5.15

For the beam and loading shown, determine the maximum normal stress due to bending on a transverse section at C.

$$+\circlearrowleft \sum M|_A = -(10 \text{ kN})(1.5 \text{ m}) + R_C(3 \text{ m}) - (3 \text{ kN/m})(2.2 \text{ m})(4.1 \text{ m}) = 0 \Rightarrow R_C = 14.02 \text{ kN}$$

$$+\uparrow \sum F_y = R_A + R_C - 10 \text{ kN} - (3 \text{ kN/m})(2.2 \text{ m}) = 0 \Rightarrow R_A = 2.58 \text{ kN}$$

$$M_C = (2.58 \text{ kN})(3 \text{ m}) - (10 \text{ kN})(1.5 \text{ m}) = -7.26 \text{ kN} \cdot \text{m}$$

$$S = \frac{1}{6}(0.1)(0.2)^2 \text{ m}^3 = \frac{1}{1500} \text{ m}^3, \quad \sigma_m = \frac{|M_C|}{S} = 10.89 \text{ MPa} \quad \blacktriangleleft$$

Problem 5.25

Fig. P5.25

Draw the shear and bending-moment diagrams for the beam and loading shown and determine the maximum normal stress due to bending.

$$+\circlearrowleft \sum M|_C = (20 \text{ kN})(1.5 \text{ m}) - (40 \text{ kN})(2.4 \text{ m}) + R_B(3.9 \text{ m}) = 0 \Rightarrow R_B = \frac{220}{13} \text{ kN}$$

$$+\uparrow \sum F_y = R_B + R_C - 20 \text{ kN} - 40 \text{ kN} = 0 \Rightarrow R_C = \frac{560}{13} \text{ kN}$$

$$M_C = (-20 \text{ kN})(1.5 \text{ m}) = -30 \text{ kN} \cdot \text{m}, \quad M_D = \left(\frac{220}{13} \text{ kN}\right)(1.5 \text{ m}) = 25.3846 \text{ kN} \cdot \text{m}$$

$$|M|_{\max} = 30 \text{ kN} \cdot \text{m}$$

$$S = 475 \times 10^3 \text{ mm}^3 = 475 \times 10^{-6} \text{ m}^3$$

$$\sigma_m = \frac{|M|_{\max}}{S} = \frac{30000}{475 \times 10^{-6}} \text{ Pa} = 63.2 \text{ MPa} \quad \blacktriangleleft$$

Problem 5.56

Fig. P5.56

Draw the shear and bending-moment diagrams for the beam and loading shown and determine the maximum normal stress due to bending.

$$+\circlearrowleft \sum M|_C = (9 \text{ kN})(0.9 \text{ m}) - (12 \text{ kN/m})(3 \text{ m})(1.5 \text{ m}) + R_B(3 \text{ m}) = 0 \Rightarrow R_B = 15.3 \text{ kN}$$

$$+\uparrow \sum F_y = R_B + R_C - 9 \text{ kN} - (12 \text{ kN/m})(3 \text{ m}) = 0 \Rightarrow R_C = 29.7 \text{ kN}$$

$$M_C = -(9 \text{ kN})(0.9 \text{ m}) = -8.1 \text{ kN} \cdot \text{m}$$

$$M(x = 0.265 \text{ m}) = (15.3 \text{ kN})(3.9 \text{ m} - 2.625 \text{ m}) - \frac{1}{2}(12 \text{ kN/m})(3 \text{ m} - 2.625 \text{ m})^2 = 9.75375 \text{ kN} \cdot \text{m}$$

$$|M|_{\max} = 9.75375 \text{ kN} \cdot \text{m}$$

$$S = 162 \times 10^3 \text{ mm}^3 = 162 \times 10^{-6} \text{ m}^3$$

$$\sigma_m = \frac{|M|_{\max}}{S} = \frac{9753.75}{162 \times 10^{-6}} \text{ Pa} = 60.2 \text{ MPa} \quad \blacktriangleleft$$

Problem 5.65

Fig. P5.65

For the beam and loading shown, design the cross section of the beam, knowing that the grade of timber used has an allowable normal stress of 12 MPa.

$$+\circlearrowleft \sum M|_A = -(1.8 \text{ kN})(0.8 \text{ m}) - (3.6 \text{ kN})(1.6 \text{ m}) + R_D(2.4 \text{ m}) = 0 \Rightarrow R_D = 3 \text{ kN}$$

$$+\uparrow \sum F_y = R_A + R_D - 1.8 \text{ kN} - 3.6 \text{ kN} = 0 \Rightarrow R_A = 2.4 \text{ kN}$$

$$|M|_{\max} = M_C = (3 \text{ kN})(0.8 \text{ m}) = 2.4 \text{ kN} \cdot \text{m}$$

$$S = \frac{1}{6}bh^2, \quad \sigma_m = \frac{|M|_{\max}}{S} = \frac{6|M|_{\max}}{bh^2} \leq \sigma_{\text{all}}$$

$$\Rightarrow h \geq \sqrt{\frac{6|M|_{\max}}{b\sigma_{\text{all}}}} = \sqrt{\frac{6(2400)}{(0.04)(12 \times 10^6)}} \text{ m} = 173.2 \text{ mm} \quad \blacktriangleleft$$

Problem 5.70

Fig. P5.70

For the beam and loading shown, design the cross section of the beam, knowing that the grade of timber used has an allowable normal stress of 12 MPa.

$$+\circlearrowleft \sum M|_A = -(3 \text{ kN/m})(3.6 \text{ m})(1.8 \text{ m}) + R_B(2.4 \text{ m}) = 0 \Rightarrow R_B = 8.1 \text{ kN}$$

$$+\uparrow \sum F_y = R_A + R_B - (3 \text{ kN/m})(3.6 \text{ m}) = 0 \Rightarrow R_A = 2.7 \text{ kN}$$

$$M(x = 0.9 \text{ m}) = \frac{1}{2}(2.7 \text{ kN})(0.9 \text{ m}) = 1.215 \text{ kN} \cdot \text{m}, \quad M_B = -\frac{1}{2}(3.6 \text{ kN})(1.2 \text{ m}) = -2.16 \text{ kN} \cdot \text{m}$$

$$|M|_{\max} = 2.16 \text{ kN} \cdot \text{m}$$

$$S = \frac{1}{6}bh^2, \quad \sigma_m = \frac{|M|_{\max}}{S} = \frac{6|M|_{\max}}{bh^2} \leq \sigma_{\text{all}}$$

$$\Rightarrow b \geq \frac{6|M|_{\max}}{h^2\sigma_{\text{all}}} = \frac{6(2160)}{(0.15)^2(12 \times 10^6)} \text{ m} = 48.0 \text{ mm} \quad \blacktriangleleft$$
